PHYSICAL DESCRIPTION:

This large, Federal style house was constructed c. 1820. The 3-story building consists of a core, a rear addition, and two single story extensions to the rear. The property also has a masonry bank barn.

The core is a tall, nearly square building consisting of three bays including frieze band window arrangement on the third floor. The end-gabled roof is supported by decorative wood brackets, located under the eaves and gabled ends (as well as the main addition). The brackets may have been added when the rear addition was constructed, and placed there at during the influence of the Italianate style. Two flush chimneys are located at each end of the building, topped with terra-cotta chimney pots. Fenestration consists of 6x6 windows on the first and second floors, and 3x3 sash windows on the third floor frieze band windows. Paneled shutters are found on the first floor windows; louvered shutters on the second and third floors. The large gap between the first and second floor indicates either the earlier presence of a pent roof or a high ceiling height on the first floor. Mirroring many houses in the Township, twin angled windows are located at the attic level under the gables. The front door is located under a pedimented extension, supported by square columns. A transom is located over the door. The core measures approximately 25' x 20".

The roof on the main addition creates an overall cross-gabled roof arrangement. The addition measures approximately 18' x 30'. The walls are stucco over stone. Fenestration on the north side mirrors that of the core. Visible on the southern side is an enclosed sleeping porch, with an enclosed porch underneath. With the porch, the addition is the thickness of the width of the core.

There are two, gabled, single story, masonry additions attached to the rear of the main addition or wing, extending the overall length of the house to approximately 75'. The additions are rather nondescript and do not contribute to the historic architecture of the main structure and wing.

Associated Building: (Barn) Behind the house is a 2-story, stucco-over-stone barn. The main entrance faces east; access is through a double sliding wood door, which is repeated on the second floor. The roof is an end gabled, standing seam tin roof.

Classification: Class I.
